

Bradford Built®

Bed Size Guide

84 x 84 (fits 40.5" - 43" C/A) - Most Fords and Chevys

84 x 84 MC (fits 37" - 39" C/A) - Most Dodges with Quad Cabs and Mega Cabs

NOTE: Measure from back of cab to center of rear axle to see which bed to go with. This is your cab-to-axle measurement. It is best to measure from center of truck, not from the side, because some cabs are curved and you won't get an accurate measurement.

96 x 136

This bed comes standard with an 84" cab-to-axle, 34" frame width, and fits all models. Available in steel models only. Check your cab-to-axle measurement when ordering.

84 x 112

96 x 112

These sizes are built to fit trucks with a 60" cab-to-axle and 34" frame width. They fit Ford and Dodge and some Chevy cab/chassis units.

90 x 112

This size is built to fit trucks with a 60" cab-to-axle and 34" frame width that measure 90" from outside to outside of the rear wheels. They fit some Chevy cab/chassis units.

Please measure the Chevy models to verify which bed size is needed.

84 x 102

96 x 102

These sizes fit box take-offs or box deletes and are 56" cab-to-axle. Available in 38" or 42" frame widths.

The 38" frame width fits most Fords up through current, Chevys through 1998 and Dodges up through 2002.

The 42" frame width fits 2003 and newer dodges and the 1999 and newer Chevys.

NOTE: On 56" cab-to-axle trucks, both frame widths are interchangeable; the mounting procedure may have to be modified.

IMPORTANT NOTE: Always get the cab-to-axle measurement to make sure the right bed is ordered.
